

Vision

- EUDAT provides a set of interoperable services that support European researchers in research data management
- Cross-infrastructures offerings is key to users for enabling their whole research data life cycle

Current collaborations

- Technical work is ongoing to integrate EUDAT data services to HPC storage to allow better connection with computing resources (like Fenix sites)
- EUDAT providers are working with user communities on exemplary use cases that make use of both data services and computing (CompBioMed, LOFAR)
- Integration has been achieved with scholarly services from OpenAire for EUDAT data sharing and discovery services

Future collaborations

- Strengthen the collaboration with HPC centres like EUROHPC and Fenix
- Collaborate across infrastructures to organise a transparent offering of services to user communities

Challenges

- Reach federated access via common AAI
- Harmonise access policies across infrastructures
