EuroCRIS - research information exchange and aggregation across institutions, regions, countries

Tuesday, 31 May 2022 15:40 (10 minutes)

One of the main goals of the euroCRIS member association is to promote system interoperability and information exchange across institutional, regional, national, funder and international research information systems in order to allow this info to be aggregated and comprehensively analysed. The CERIF standard (Common European Research Information Format), endorsed by the EC, is the main tool to achieve this interoperability. Due to the ever-growing amount of information around research datasets and its associated metadata that are being collected in CRIS systems of all kinds, these could gradually become a key infrastructure for EOSC data provision purposes.

Presenter: DE CASTRO, Pablo (EuroCRIS Board member)

Session Classification: Cross-e-Infrastructure collaboration and coordination (network, computing, data)
