Digitalisation for energy

Tuesday, 31 May 2022 10:35 (10 minutes)

The European Energy Research Alliance (EERA) identified several cross-cutting activities that should be reinforced within the energy sector, being digitalisation a paramount one as it is changing the way in which research and innovation is being carried out. As a result, the transversal Joint Programme 'Digitalisation for Energy' was launched as a transversal activity pilot in Fall 2020 and officially approved by the 2022 General Assembly. In this talk, the different activities that have been carried out, the planned roadmap, and the specific implication with the e-Infrastructure domain are presented.

Presenter: MAYO-GARCÍA, Rafael (CIEMAT)

Session Classification: The twin "green and digital" transition in e-Infrastructures
