e-IRG Workshop, Malmö
A perspective on NIS2

Author: Gilles Massen
Classification: public

Restena: the context

- No reason to panic. We are privileged.
- NREN & .LU registry manager
 - .LU : critical infrastructure
 - .LU : essential service (NIS)
- ISO27001 certified
- Excellent relations with the 'competent authority' (telecom regulator)

Research & Education Institutions

- Somewhat aware, largely unprepared
- Security community : "CISO group"
- Restena will start providing some core services
 - assessment with the GÉANT security baseline
 - ... but some tasks need to be done in-house (e.g. risk analysis)

Risks and Unknowns

- Who will be designated essential / important?
- Supply chains?
- Room for innovation?

- Drain on resources
- Inappropriate security frameworks / auditors
- Degraded work climate
