## DDI-CDI: Current Status and Further Developments

*Wednesday, 29 November 2023 15:00 (30 minutes)*

This presentation will summarize the capabilities of the DDI Cross-Domain Interoperability specification, and describe how early implementations have used the standard, both on its own and in combination with other DDI specifications. The focus of the working group in the near- to mid-term will be described, as will prospects for adoption through various FAIR initiatives. The range of available tools for working with the specification will be covered, as well as expected and supported implementation approaches in RDF as well as XML, including alignment with non-DDI standards such as SKOS, Schema.org, and DCAT.
