

DDoS and Network Monitoring Workshop

Thursday, 11 April 2024 13:30 (3h 30m)

The session will be split in two parts, with the second part most possibly starting after a short break.

Part 1: Threat sharing for proactive (D)DoS defence (co-host: Roderick Mooi)

We will discuss ideas emerging from collaborative discussions between the CTI and DDoS subtask teams in WP8 Task 3.

How can NRENs share actionable intel around (D)DoS attacks (with an emphasis on those targeting R&E) and better prepare our defences accordingly?

Part 2: General DDoS tooling and attack discussions

We will discuss the general DDoS situation, and current tooling & experiences from within the GÉANT project and the NREN community. While we won't be able to do a deep dive into recent events - as we won't go more retractive than TLP:GREEN in this session, feel free to share your lessons learned as well as tooling experiences.

Presenter: SCHOENFELDER, Jochen
