

## **Real world DDOS attack examples and tips how to survive**

*Wednesday, 10 April 2024 14:30 (20 minutes)*

In this talk we will present examples the Macedonian NREN saw in the DDOS domain in the timeline from the end of the pandemic up to end of 2023.

We will show how we implemented visibility tools and mitigation products as well as what we see as the landscape for 2024.

All types of DDOS attacks, Flow analysis tools and of course mitigation (scrub, firewall, develop your own or use what is there from the community)

Attached is the base presentation from the biggest attacks which will include latest developments from 2023 and even some super fresh attack types we saw in the holyday season.

The talk is quite technical and a 10 minute discussion at the end with the audience will be held to hear other similar experiences.
