

Human Factors in Security – Research vs. Current Practices

Wednesday, 10 April 2024 11:00 (20 minutes)

Let's rethink how we deal with human factors in information security. This session advocates for a human-centred approach, designing security with people and processes at its heart.

This talk will provide examples of the most common pitfalls in managing human risk and look at current practices through the latest research lens. Hopefully this session will leave you with plenty of thoughts and new ideas of how to address the human factors more successfully.

Presenter: PUHZE, Cornelia (SWITCH)

Session Classification: Human Factors
