Lies are (not!) everywhere

Thursday, 11 April 2024 11:40 (40 minutes)

How has AI changed our ability to recognise what is really true? What are lies and how easily have they been spreading? How can we use AI practically to help and not do harm in journalism? It's not just AI. How can we use the available data to actually help people? And most importantly, how can we better use the most complex matter in the known universe that we wear between our ears to understand the world?

Do we have a solution? Yes we do, and it's not primarily found in technology.

Presenter: STACH, Daniel

Session Classification: Closing Plenary
