ONTOLISST kick-off

Thursday, 5 December 2024 09:00 (3h 30m)

The new 2-year ONTOLISST project starts in December 2024. The project idea is a result of discussions in the EDDI2023 conference. ONTOLISST will develop a simplified multilingual ontology and research whether and how NLP tools can help with (semi)automated (meta)data curation. The work will build on social scientific metadata in DDI format in different languages and from varius sources. The project is funded by the first OSCARS Cascading Grant call.
