Code Audits

Wednesday, 14 July 2021 14:00 (1 hour)

"Code audits - how to improve the quality of the code"

Software without bugs or vulnerabilities doesn't exist. If your organization runs software development teams they would be aware of the importance of the secure software development lifecycles and relating subjects. This webinar will introduce some basic concepts as well as tools that help developers to identify bugs before the software goes into production.

What you will learn:

What are code audits?

Why code audits?

Planning

- How to deal with closed source software?

- How to deal with open source software?

Tools

- Code Scanner

- SonarQube

- White Source

- Coverity?

- OWASP Dependency Check

Fuzzing/Fuzzer

- Web apps:

- OWASP ZAP-Proxy

- Burp suite

- Microsoft One Fuzz <https://github.com/microsoft/onefuzz>

Static Application Security Testing (SAST) Tools

Dynamic Application Security Testing (DAST) Tools (Primarily for web apps)

Interactive Application Security Testing (IAST) Tools - (Primarily for web apps and web APIs)

Static Code Quality Tools

Duration: 1 hour

Presenter(s)/Facilitator(s): Stefan Kelm, DFN-CERT

Affiliation (WP/Task): WP8 Task 1

Authors (content is created by): Tobias Dussa, Klaus Möller, DFN-CERT

Contribution ID: 2

Type: **not specified**

Vulnerability Disclosure

Friday, 16 July 2021 14:00 (1 hour)

"Responsible Disclosure – Letting the cat out of the bag"

So you have found vulnerabilities in other people's code. Or other people have found vulnerabilities in your own code. Either way: how to handle the situation? In the long run, trying to keep information about the vulnerability under wraps is unlikely to work, so in this module, we will cover some aspects and strategies of how to approach this issue.

What you will learn:

- Concepts
- Vulnerability handling - Vulnerability disclosure
- Exploitation
- Advisories Defining Vulnerability policies How to report vulnerabilities to others (Vulnerability reporting)
- CVE CNA
- Coordinating vulnerability activities Receiving vulnerability information

Duration: 1 hour

Webinar Host: Pauline Smith (GLAD)

Presenter(s)/Facilitator(s): Tobias Dussa, DFN-CERT

Affiliation (WP/Task): WP8 Task 1

Authors (content is created by): Stefan Kelm, Klaus Möller DFN-CERT

Breach and Attack Simulation

Wednesday, 15 September 2021 14:00 (1 hour)

Date of delivery: Wednesday, 08th of September 2021

"Break and Attack Simulation - matching attacker behaviour with vulnerabilities"

Breach and Attack Simulation (BAS) is a relatively new approach to vulnerability assessment that goes beyond simple scoring of vulnerabilities by also taking the modus operandi of adversaries into account. This webinar will give an introduction into the topic and present some open source tools to do BAS.

What you will learn:

What is ...

Why ...

Planning

Tools

- Infection Monkey
- Metta adversarial simulation tool (Uber)
- Flight SIM (AlphaSOC)
- Red Team Automation (Endgame)
- Atomi Red Team (Red Canary)

Duration: 1 hour

Webinar Host: Pauline Smith (GLAD)

Presenter(s)/Facilitator(s): Klaus Möller, DFN-CERT

Affiliation (WP/Task): WP8 Task 1

Authors (content is created by): Stefan Kelm, Tobias Dussa, DFN-CERT
